ADVANCES IN CULTURAL DEVELOPMENT AND BEHAVIOR- 1965

The Development of Animal Personality-Ann V. Hedrick 2017-04-17

Although the topic of animal personality has recently generated much interest, the role of development is little understood. This collection of papers deals with the development of animal personality. Topics include the roles of genetic effects, maternal effects, social partners, predation and parasitism risk, and environmental complexity in the development of personality, the effects of personality on survival, and the development of collective personality and movement as a driver of personality development. The organisms covered include insects, spiders, fishes, and birds. This volume illustrates the diversity of approaches that have shed light on the development of animal personality in the past several years.

Transforming the Workforce for Children Birth Through Age 8-National Research Council 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on the common foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Researches on the Danube and the Adriatic-Andrew Archibald Paton 1862

Sub-and Supra-Second Timing: Brain, Learning and Development-Lihan Chen 2016-08-15 Time perception in the range of milliseconds to a few seconds is essential for many important sensory and perceptual tasks including speech perception, motion perception, motor coordination, and cross-modal interaction. For the brain to be in synchrony with the environment, the physical differences in the speeds of light and sound, as well as stimuli from other modalities such as odors, must be processed and coordinated (Pippel & Bao 2014, Bao et al., 2015). Time is a subjective feeling that is modulated by emotional states which trigger temporal distortions (temporal dilation vs. contraction) (Wittmann et al., 2014), hence give rise to subjective time that may be different to event time as initially registered in the brain. Recent research suggests that time perception in a multisensory world is subject to prior task experience and shaped by (statistical) learning processes. Humans are active learners. That is, the engagement of the own body in a timing task within a perceptual-action loop will make a noticeable difference in timing performance, as compared to when humans only passively perceive the same perceptual scenario (Bao et al., 2015; Chen & Vroomen, 2013). This Research Topic of “Sub-and Supra-Second Timing: Brain, Learning and Development” has integrated sixteen submissions of novel research on sub- and supra-timing. We have categorized the papers in this topic into the following four themes, from which we can deduce trends of research about multisensory timing in the sub- and supra-second range: Sensory timing, interaction and reliability Adaptive representation of time, learning and temporal prediction Sensory-motor synchronization Cognitive-motor synchronization Perspective of psychological moment and temporal organization Overall, the collections in “Sub-and Supra-Second Timing: Brain, Learning and Development” show some recent trends and debates in multisensory timing research as well as provide a venue to inspire future work in multisensory timing.

DEVELOPMENT ADMINISTRATION-S. A. PALEKAR 2012-09-05 Development administration is based on two important concepts—administration of development and administrative development. It involves modernization of administrative structure, capabilities of personnel, and attitudinal and behavioural changes among the administrators. This book simplifies the administrative functions through its examples, theories and concepts, and deals with the field of development administration with an integrated approach. This book throws light on the administrative development processes in and around the world. It also draws a parallel between how the administrative development has helped the nation in overall development, and what is the scenario in the developing countries, especially in India. It also focuses on the issues like programme and project management in India, Planning machinery of Social Welfare Service in India. It further dwells into the impact of the economic reforms on the social sectors of India. The book skilfully explains how the State plays a critical role in its socio-economic development, and how it faces the new challenges because of globalisation and liberalization. The book is intended for the postgraduate students of Public Administration and Political Science. Besides, it is equally beneficial for the students preparing for the Civil Services Examination.

Developing Property Sustainably-Sara J. Wilkinson 2015-06-05 Developing Property Sustainably introduces readers to the key issues surrounding sustainable property development in the global marketplace. Pulling together received wisdom and original research, the authors provide a clear and practical overview of the sustainable property development process as well as a critical appraisal of the problems faced by global built environment stakeholders. Throughout, the authors demonstrate how the property development industry could and should respond better to debate on sustainable practices in the built environment by adopting more rigorous measurement techniques and sustainable approaches. Starting by exploring key definitions and stakeholders, the book goes on to explore finance, planning, construction, procurement, occupation, retrofit and lifecycle sustainability in order to provide the reader with a detailed understanding of all the issues involved in the delivery of sustainable property development from inception to occupation and beyond. Throughout the book, international case studies are used to demonstrate how sustainable property development is applied in practice around the world. With a logical chapter structure and accessible writing style, Developing Property Sustainably would be perfect for use on undergraduate and postgraduate modules and courses in real estate development, property and urban development and other built environment programmes.

Recent Developments in Operational Research-Manju Lata Agarwal 2002-05-01 This volume brings out recent developments and current activity in different areas of operational research. The topics covered include the following major areas: mathematical programming, queuing theory, reliability and maintenance, inventory and production control, statistical methods, networks and sequencing, and information technology. Recent Developments in Operational Research will be of considerable value and interest to operational researchers, both theoreticians and practitioners, as well as a reference source for research workers.
